## SmarTone Launches ST Protect

Offering customers better care and protection against mobile security threats

HONG KONG, 2 June 2016 – SmarTone today announced the launch of ST Protect, an innovative anti-cyberattack software with on-device Artificial Intelligence (AI) and a Machine Learning behavioural engine designed to protect smartphones from known and even unknown threats. Cyber attacks have rocketed in recent years. In Hong Kong, there was an 86% increase in the number of security issues related to mobile devices in 2015 compared to the previous year. Globally, more than 87% of the top mobile apps have been hacked.

"We have always been committed to offering customers better care and protection with our services. A few years ago, we observed that Hong Kong people were overwhelmed by junk calls and so we developed Call Guard, the world's first app that blocks junk calls at the mobile network; recently we have observed the increasing trend of mobile threats and cyber attacks around the world as well as in Hong Kong, with WiFi attacks, viruses and malware continuing to become more prevalent. In many cases, these mobile security issues could lead to severe consequences for smartphone users – from financial loss to the exposure of their private data or personal communications to the public, and even ID theft. There is a pressing need for smartphone users to protect their phones. Therefore, we are introducing ST Protect to help customers actively combat mobile security threats, giving them peace of mind," said Mr. Stephen Chau, Interim Chief Executive Officer at SmarTone.

SmarTone Mobile Communications Limited 31/F, Millennium City 2, 378 Kwun Tong Road, Kwun Tong, Kowloon, Hong Kong T: 852 3128 2828 F: 852 3128 2266

數碼通電訊有限公司 香港九龍觀塘觀塘道378號 創紀之城二期31樓

ST Protect is powered by Zimperium, a leading US-based security and technology company that has invented the world's first mobile Al intrusion prevention system. It

provides continuous and real-time protection to smartphones against the following

mobile threats.

WiFi attacks and hacking, especially Man-in-the-middle (MITM) attacks, no matter

whether users are in Hong Kong or overseas: ST Protect alerts users to immediately

terminate unsafe WiFi connections if threats are found.

Malicious apps, virus and malware: ST Protect detects and stops abnormal app

activities with patented behavioural analytics, and ensures apps only access

permitted information. It also offers protection for known and unknown threats and

even zero-day attacks.

Risky links and hazardous websites: ST Protect alerts users when their smartphone

is under attack.

ST Protect is available exclusively to SmarTone customers<sup>^</sup> and for both iPhones and

Android smartphones. Download ST Protect now through the App Store or Google Play

to enjoy a one-month free trial\*.
